Dominion Voice and Data Provides Innovative Home Office Cybersecurity Solutions for the Nearly 50% of Remote Workers Infected By Malware

Leading Managed Technology Services Provider (MTSP) Protects SMBs and Their Employees

MIDLOTHIAN, VA – May 2020 - Dominion Voice and Data, a leading managed technology services provider (MTSP), announced today that the company is providing home office cybersecurity for remote workers to support them through the current pandemic and beyond.

According to a BitSight report, "Identifying Unique Risks of Work From Home Remote Office Networks," the findings revealed that "45% of companies had malware on their corporate-associated home networks." The study included more than 41,000 organizations. For small to mid-sized businesses (SMBs) this has very strong implications for their remote workforce. Where SMBs typically could ignore the cybersecurity of the home office environment in the past, that's no longer possible as employees have been forced to work from home, and rely on corporate connectivity, software and

devices to perform their daily tasks.

"To sum it all up, vulnerability at the home-office is now corporate vulnerability," stated Chad Tester, COO of Dominion Voice and Data. "Unfortunately, whenever we get back to normal life, it won't be so normal, anymore," he said, citing the expected office policies which will force people to adhere to staggered schedules, where a worker comes into the office on Mondays/Wednesdays and another comes on Tuesdays/Thursdays. The expected growth of remote working, even after the states reopen will still be enormous. Work-from-home is fast becoming the "new normal" and with tech giants like Twitter, Microsoft, Google and Facebook all extending work-from-home policies, many SMBs are trying to figure out the best way to reorganize themselves for success. Twitter and Square have announced their plans to let employees work remotely in perpetuity. Google and Facebook have remote policies in place at least until 2021. Since these tech giants often serve as a leading

indicator for SMBs across the country, business owners are looking for innovative, yet practical, ways to adapt to this new working environment and to ensure that their virtual infrastructure is secure.

The two biggest challenges for business owners who find themselves in this new work-from-home scenario are 1) How do I properly manage my employees? and 2) Which technology do we really need? The past several weeks have been a crash course in management, forcing business owners to innovate management solutions for employees, which leaves the second challenge up for resolution. For any business owner who wants to address this vulnerability, at a minimum, they must equip their employees with a combination of the following technologies, SD-WAN, firewall and a printer/scanner. Virtual desktops provide employees with access to apps, software and technology that they utilize on their work computer. SD-WAN establishes a secure and efficient means of connectivity for employees and a monitoring solution ensures

the ongoing security of any devices or networks from cyberattacks, like phishing or ransomware. Lastly, printer/scanner solutions are absolute necessities for specific employees.

With a relatively simple bundle of technology, SMBs can circumvent many of the challenges imposed on them through this pandemic, and they can set their company up for success as we transition into the “new normal.” While remote working has been steadily growing for years, there is now plenty of data, and common sense, to back these necessary shifts. According to Kate Lister, President of Global Workplace Analytics, “Our best estimate is that 25-30% of the workforce will be working-from-home multiple days a week by the end of 2021.” That number is up from 3.6% of employees working from home half-time or more

ABOUT DOMINION VOICE AND DATA

Dominion Voice and Data is Central Virginia's Leading Cloud-Based Managed Services Company. Our mission is to advance our client's business goals through delivery of superior technology solutions and world class support.

At Dominion, we are your trusted technology adviser and reliable business partner so that we can design you a solution that fits your business model.

Dominion Voice and Data is committed to maintaining the confidentiality of information that belong to our customers, especially Protected Health Information. To that end, we adhere to the requirements of the HIPAA Privacy Rule and the HIPAA Security Rule. We comply with all Business Associate obligations under HIPAA/HITECH, enabling Dominion Voice and Data to provide the highest level of services to our customers involved in the healthcare professions.
